PROFESSIONAL SUMMARY

Frontend engineer with 1.5+ years of experience in scalable web apps and modern frameworks. Previously a founding engineer, specializing in React.js, Next.js, and product-focused frontend architecture to improve performance and user experience across teams.

EXPERIENCE

Frontend Engineer, [Enclave](#)

Nov 2025 – March 2026

- Building frontend features for [fireplace.gg](#), a high-performance prediction-market trading terminal using **Next.js**, **TypeScript**, and real-time **WebSocket**-powered data.
- Implemented core trade flows across market discovery, filters and discovery, 15-minute markets, order execution, and portfolio views, while developing scalable UI components and optimizing performance.
- Designed and shipped product surfaces including comprehensive **filters**, **wallet tracker** and **wallet lists** (static and dynamic), **holders** and **PnL cards**, **leaderboards**, **referrals**, **deposit flows**, and **user preferences**, improving trader visibility and engagement.
- Integrated **Sentry** and **PostHog** to instrument core trade flows and real-time interactions, track user behavior, and guide iterative UX and performance improvements.

Founding Engineer, [Bitscale.ai](#)

Feb 2025 – Nov 2025

- Led frontend architecture and major features using **Next.js** and **TypeScript**, managed Docker based CI/CD on AWS, contributed to **Go** backend workflows, and supported SOC2 compliance.
- Optimized **50+** data-provider workflows and built workbook (grouped-grid) systems, implemented programmatic SEO generating **10,000+** pages to boost organic reach.
- Built an agentic grid system (**BitPilot**) with LLM streaming and integrated **PostHog** analytics, developed internal admin panels, introduced **Radix UI**, and refactored the MVP into a stable production foundation.

Frontend Engineer Intern, [Zenduty](#) (acq. [Xurrent](#))

Summer 2023 & Summer 2024

- Implemented **BAT** test cases that reduced runtime from **30 minutes** to **2 minutes** by identifying and resolving critical edge cases.
- Integrated **PostHog** analytics, ran **A/B tests**, and provided insights to the marketing team to drive data-informed UX decisions.
- Developed the frontend using **Gatsby** and **React** with **TypeScript**, focusing on performance and maintainable architecture.

PROJECTS

[pageo.me](#)

- Developing a scalable, all-in-one link management platform using **Next.js**, **TypeScript**, and custom **Tailwind CSS**, integrating **Drizzle ORM** and **NeonDB (PostgreSQL)** for robust data handling.
- Implemented secure authentication with **BetterAuth**, **Framer Motion** animations, and **Vercel** deployment,
- Growing the active user base to **100+** through continuous UX improvements.

[flib.store](#)

- Built flib's web app with **Next.js**, **TypeScript**, designing and implementing core product flows end to end.
- Developed a complete B2B merch automation and order management platform using **Next.js**, **Drizzle ORM**, **Xata (PostgreSQL)**, and **Zustand** for state management, deployed on **Vercel** to reliably handle merchandise workflows and operations for B2B clients.
- Worked with clients such as **Google** and **Salesforce** to power custom merch items for their attendees.

EDUCATION

BTECH, Computer Science, The Northcap University
